AI Proposal Generator

ITXDIGITAL
SERVICES
ITX DIGITAL SERVICES PRIVATE LIMITED

Project Name: AI Proposal Generator
Prepared For: Development Team
Prepared By: ITX Digital Services (PVT) LTD
Date: 26-April-2026

1. Project Overview

The **AI Proposal Generator** is a simple web-based system that helps generate **basic project proposals automatically** based on client requirements.

Currently, creating proposals manually takes time. This system will:

- Reduce manual work
- Generate quick quotations/proposals
- Maintain consistency in documents

Final Goal: *Save time and improve efficiency when responding to clients.*

2. Objectives

- Automatically generate project proposals from client input
- Provide a structured and professional output
- Allow easy editing before sending to clients
- Help the company respond faster to inquiries

3. Users

- Internal Staff (Business Team / Sales Team)
- Admin

4. Core Features

4.1 Input Module (Client Requirements Form)

User should be able to enter:

- Client Name
- Company Name
- Project Title
- Project Description
- Required Features (bullet points or text)
- Budget Range (optional)
- Timeline (optional)
- Platform Type (Web / Mobile / Both)

4.2 AI Proposal Generation

System should:

- Analyze the input
- Generate a **basic proposal including:**
 - Introduction
 - Understanding of Requirements
 - Proposed Solution
 - Features List
 - Estimated Timeline
 - Budget (basic estimation or placeholder)
 - Conclusion

4.3 Proposal Output View

- Display generated proposal in clean format
- Sections should be clearly structured
- User can:
 - Edit content
 - Copy text
 - Download as PDF (basic version optional)

4.4 Save & Manage Proposals (Optional – Future Ready)

- Save generated proposals
- View previous proposals
- Search by client name

5. System Requirements

Frontend:

- Simple UI (React / HTML / Tailwind recommended)
- Form + Output display

Backend:

- Any (Node.js / PHP / Python)
- API integration for AI

6. Basic Workflow

1. User enters client requirements
2. Clicks “**Generate Proposal**”
3. System processes input
4. AI generates structured proposal
5. User reviews & edits

6. User copies or downloads proposal

7. Non-Functional Requirements

- Simple and clean UI
- Fast response time
- Easy to use (non-technical users)
- Basic validation (required fields)

8. Out of Scope

- Advanced AI training
- Complex pricing algorithms
- Multi-user authentication system
- Full CRM integration

9. Future Enhancements

- Multiple proposal templates
- Auto pricing calculation
- Client database integration
- Email sending feature
- AI improvement with learning
- Multi-language support

10. Deliverables

Developer must provide:

- Working system (frontend + backend)
- Source code

- Basic documentation
- Sample generated proposals

11. Success Criteria

- System generates proposal based on input
- Output is readable and structured
- Saves at least **50–70% time** compared to manual work

12. Example Use Case

Input:

- Client: X Company
- Project: E-commerce Website
- Features: Cart, Payment, Admin Panel

Output:

- Full proposal with sections (intro, features, timeline, etc.)
